Description

The Internet is not something that remains safely behind our computer screens. When we are browsing the Internet we are moving through a space that is no less real than the other spaces we navigate in our day to day lives. This work is a chrome extension that creates a generative soundscape using the HTTP cookies installed on a user's computer as raw material. It was made to bring more senses to bear on the user's experience of the Internet. The reason this is important is to give users a more complete understanding of the Internet, and what is being done to their computers while they are browsing.
